Session 1:

1. Definition of a 'Program' with a Real-Life Example.

A **program** is a set of step-by-step instructions given to a computer to perform a specific task automatically. It takes input from the user, processes it according to logical rules, and produces an output.

- **Real-life Example (Zomato / Paytm):** When you send money on **Paytm**, the program takes your input (UPI PIN and amount), verifies your bank balance, deducts the money, and displays a "Payment Successful" confirmation screen.

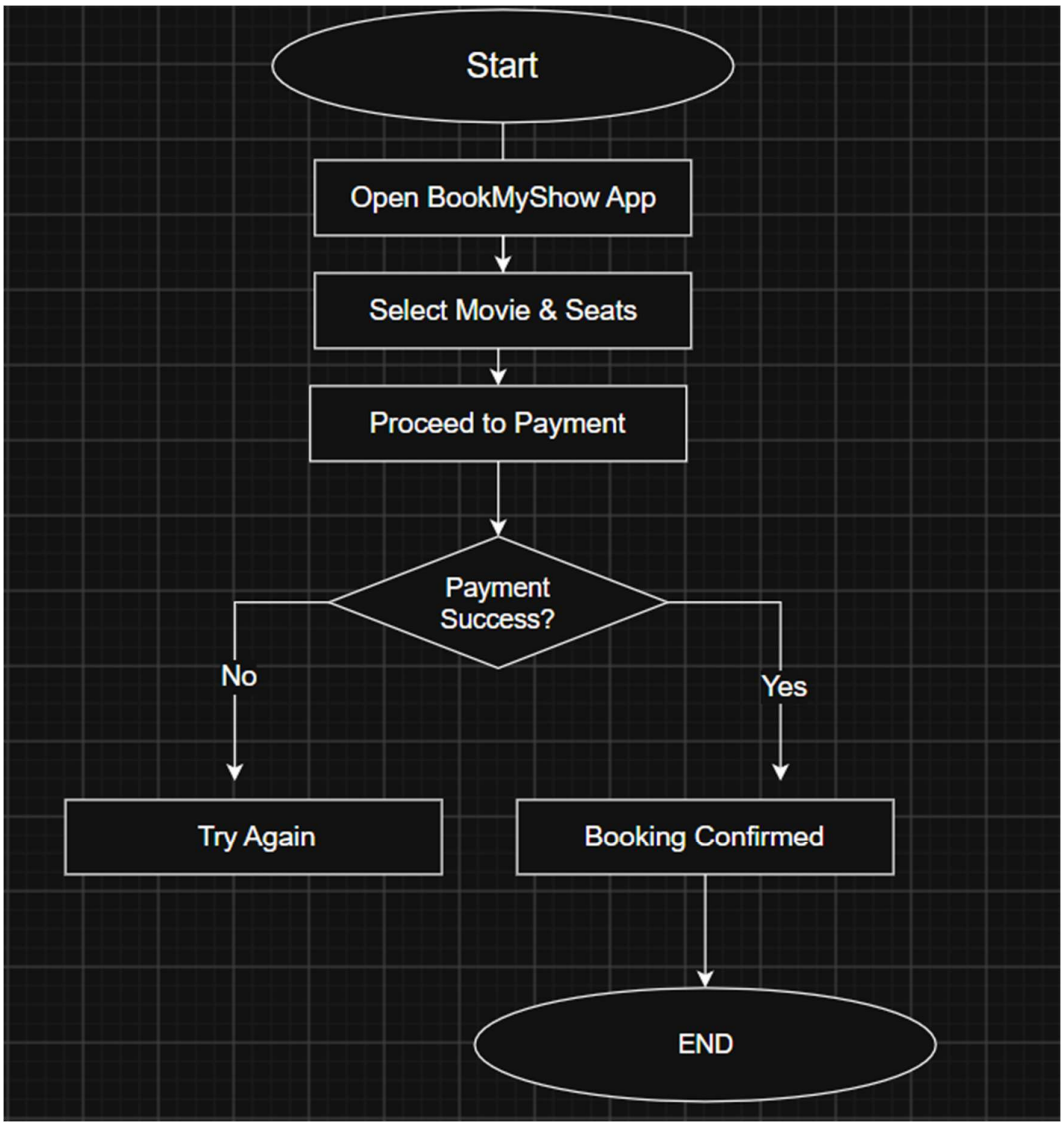

2. Three Popular Programming Languages (Compiled, Interpreted, or Both):

1. Python: Interpreted (Executes code line-by-line using an interpreter).

2. Java: Both (Compiled into bytecode first, then interpreted/executed using the JVM).

3. JavaScript: Interpreted (Executed directly inside web browsers using Just-In-Time engines).

3. Flowchart for Booking a Movie Ticket on BookMyShow.

4. Algorithm for Ordering Food on Swiggy.

Step 1: Start.

Step 2: Open the Swiggy application on your mobile phone.

Step 3: Enter or confirm your delivery location.

Step 4: Search for a restaurant or food item.

Step 5: Select the items you want to order and add them to the cart.

Step 6: Go to the cart, review your order, and apply any discount coupons.

Step 7: Select your preferred payment method (UPI, credit/debit card, or net banking).

Step 8: Complete the payment by entering your PIN or OTP.

Step 9: Receive order confirmation and track your order status.

Step 10: Stop.
